

Equipment related to rechargeable batteries P4* Series

- Material restrictions**

- Dry environment**
DEW POINT
-70°C

- Stable operation**

- Fights dust and its generation**

Each manufacturing process in the manufacturing of rechargeable batteries requires support for a variety of environments, such as dust/explosion-proof/vacuum/ultra-dry and material restrictions.

1 Electrode material

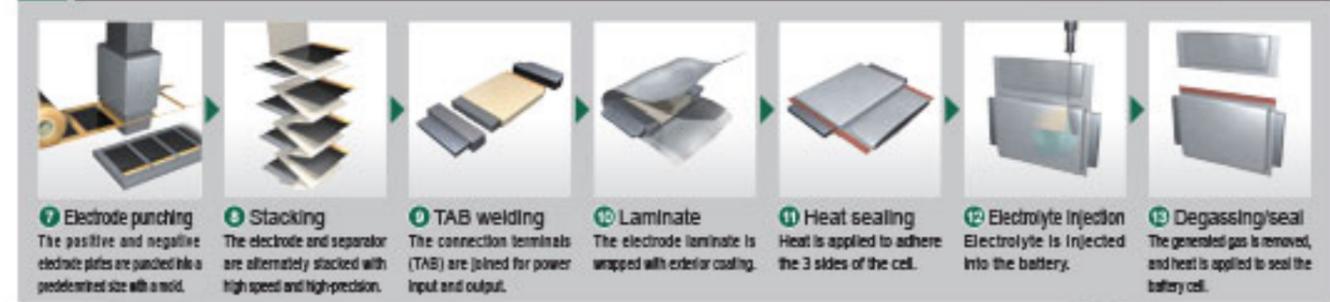

1 Electrode material 2 Electrolyte 3 Separator

2 Electrode manufacturing process

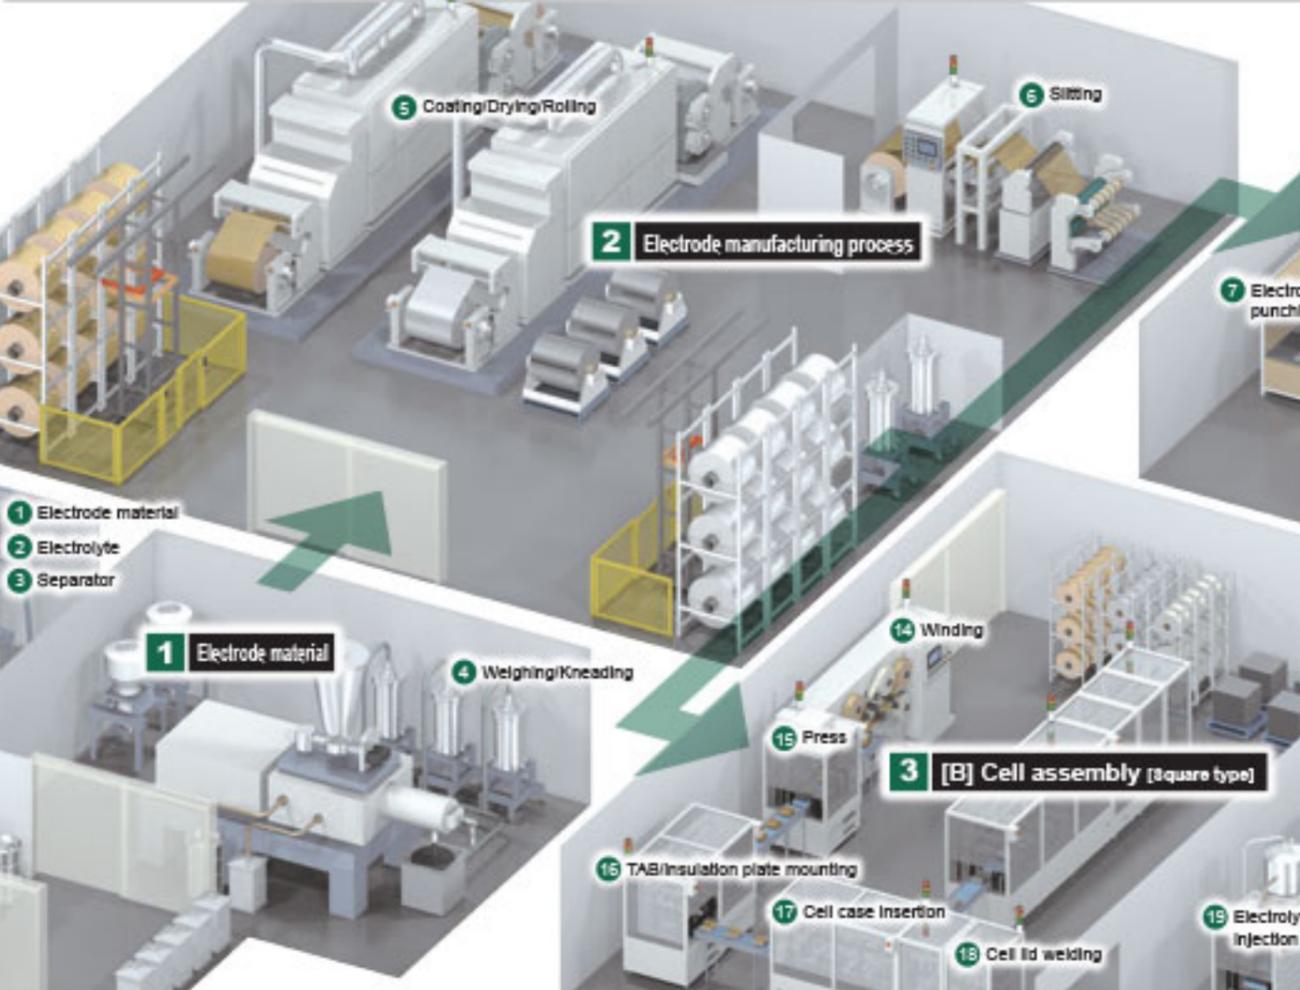

4 Weighing/Kneading The cathode/anode materials are measured in proper amounts and mixed into pastes.
5 Coating/Drying/Rolling The electrode material is uniformly applied to the metal foil. It is speed dried by hot air and moisture is evaporated. The electrode is rolled with a roller to enhance density.
6 Slitting Rolls of electrode material and separator are cut into the appropriate size.

3 [A] Cell assembly [Laminate type]

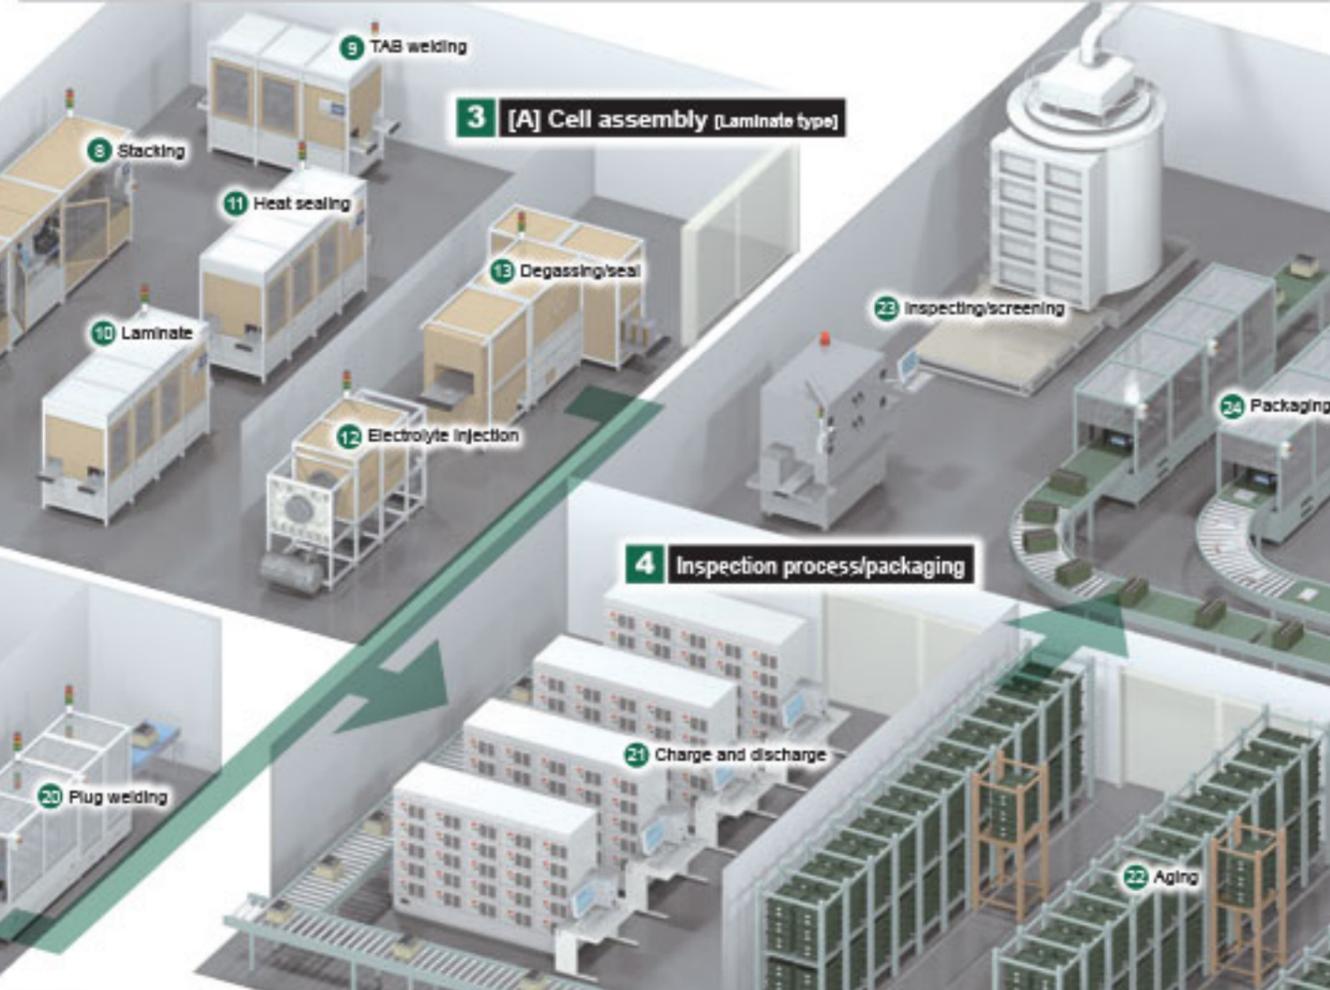

7 Electrode punching The positive and negative electrode plates are punched into a predetermined size with a mold.
8 Stacking The electrode and separator are alternately stacked with high speed and high precision.
9 TAB welding The connection terminals (TAB) are joined for power input and output.
10 Laminate The electrode laminate is wrapped with exterior coating.
11 Heat sealing Heat is applied to adhere the 3 sides of the cell.
12 Electrolyte injection Electrolyte is injected into the battery.
13 Degassing/seal The generated gas is removed, and heat is applied to seal the battery cell.

3 [B] Cell assembly [square type]

14 Winding Separators are sandwiched between the anode and cathode elements and wound.
15 Press The wound elements are pressed.
16 TAB/insulation plate mounting The terminals (TAB) and insulating plates are joined for power input and output.
17 Cell case insertion The wound body is inserted into the cell case.
18 Cell lid welding The cell case and lid are laser-welded.
19 Electrolyte injection Electrolyte is injected into the battery.
20 Welding of the filler plug The filler plug is welded to completely seal the battery cell.

4 Inspection process/Packaging

21 Charge / Discharge The battery is activated by repeatedly charging and discharging.
22 Aging The fully charged battery cell is left at a predetermined temperature for a fixed period.
23 Inspection/Screening Various performances as a product are determined.
24 Packaging Battery cells are stacked and sealed in the case.

Contributes to "Stable operation" and "Long service life components" for equipment that never stops.

With the progress of rechargeable and next-generation battery development, we have responded to the demand for components with improved dry environmental performance. Our products are compatible with the production stability of the manufacturing process and consistently meet the needs of rechargeable battery manufacturing, from electrode production to packaging.

Make Progress!!

P4 Series

Material restrictions

Restrict materials for component parts.

Restricts the use of materials and surface treatments inappropriate for the rechargeable battery manufacturing process.

- Limited copper material
- Limited zinc material
- Limited nickel-based material
- Limited zinc plating
- Limited electrolytic nickel plating

Dry environment

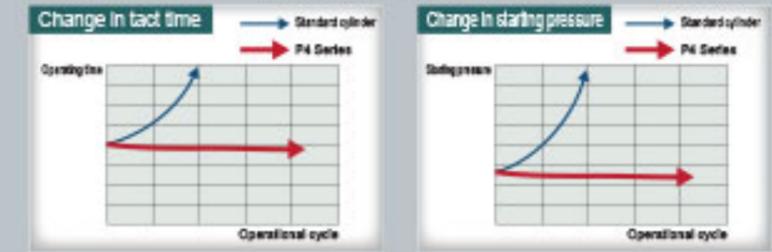

Long service life even in -70°C dew point environments

Adopted grease compatible with ultra-dry environments. Retains the smooth operation of the sliding part for long periods, even in dry environments.

Stable operation

Contributing to a system that never stops

Uses a special grease that supports low dew points and high frequency use. Contributes to stable operation of equipment.

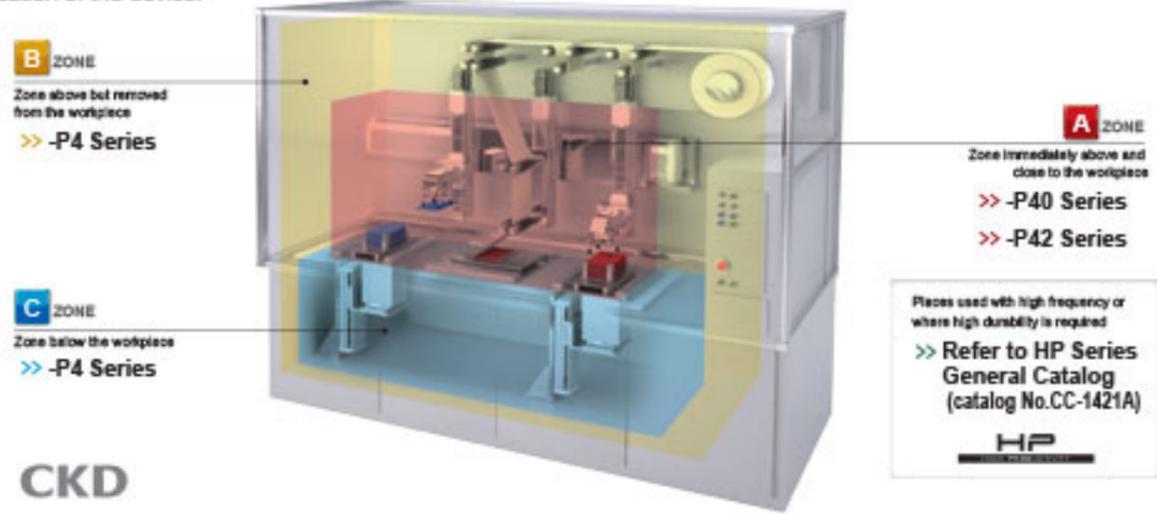

Fights dust and its generation

Suppresses dust generation of metal wear powder

Equipped with a local exhaust function (vacuum treatment port). Prevents contamination of the electrodes or cell by not leaking the metal wear powder outside.

Series Zoning

Compatible models are available in 2 grades (P4 Series, P40 Series) according to the atmosphere and installation location of the device.

Contributes to the needs of all types of rechargeable batteries and next-generation battery manufacturing processes.

Material limitations for the flow path part/sliding part

*Trace amounts present in the alloy are excluded.

Same mounting size as standard

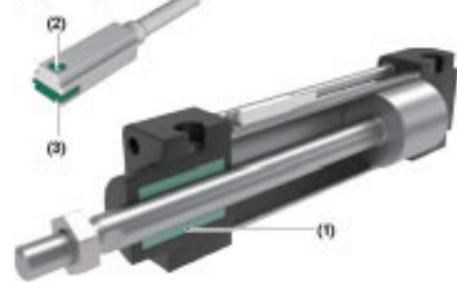

-P4 Series

The use of copper, zinc, and nickel-based materials and electrolytic nickel plating is limited in the construction of the flow path part and sliding part.

Cylinder

- (1) Copper-based bearing
→ Cast iron-based bearing
- (2) SUS screw
- (3) SUS plate

Pneumatic valves

- (1) SUS fitting

Regulator

- (1) Exhaust port

Electric actuator

We offer a wide range of motor-equipped (stepping motor) and motorless (servo motor/stepping motor) variations.

Same mounting size as standard

Electrolyte proof specifications

Improved environmental resistance with raydent equivalent processing.

- (1) Standard
- (2) Anti-rust treated

Motorless specifications

Motor specification

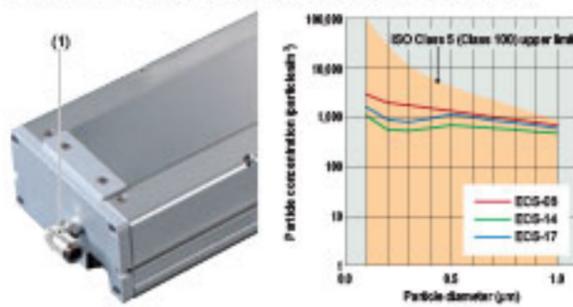

Low contamination specifications

- (1) Counters dust generation

Motorless specifications

Class 100 or equivalent with vacuum treatment port.

Motor specification

Material limitations for all parts

*Electrical components (coil, circuit, wiring section, etc.) are excluded.
*Trace amounts present in the alloy are excluded.

Same mounting size as standard

-P40 Series

The use of copper, zinc, and nickel-based materials, zinc plating, and electrolytic nickel plating is limited in the construction of all parts.

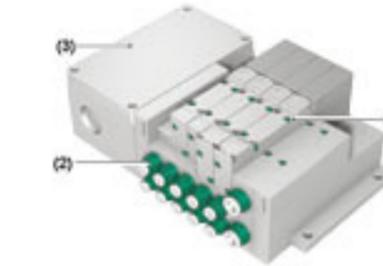

Cylinder

- (1) Electroless Ni plating

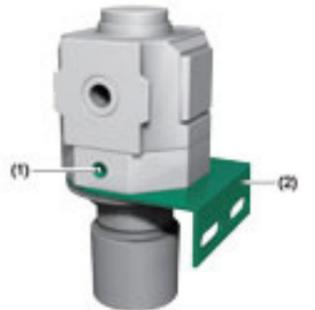

Pneumatic valves

- (1) SUS screw
 - (2) SUS fitting
- Electric circuit unit IP65*
- *D-sub-connector specifications are IP40.

Regulator

- (1) Exhaust port
- (2) Electroless Ni plating

1/5 or less dust generation rate achieved

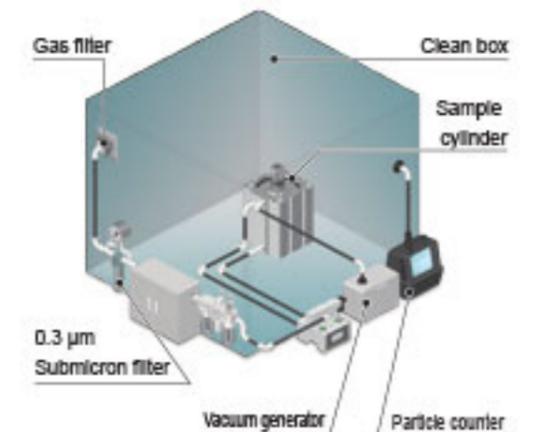

-P42 Series

Local exhaust function (vacuum treatment port) is added to P40 specifications. Prevents metal powder from contaminating the electrode and cell, and reduces product failure of rechargeable batteries. In addition, SUS is used in piston rods.

Cylinder

- (1) Vacuum treatment
- *Dimensions differs from standard.

Test method

The cylinder is operated in a clean box, and dust generation rate is measured.

Test conditions

Supply pressure	0.5 MPa
Cylinder speed	200 mm/s
Frequency	30cpm
Load	No load

For more information about the -P41 Series, please contact our sales department.

Compact cylinder	Guided cylinder	Rodless cylinder	Compact cylinder	Twin rod cylinder	Linear slide cylinder Standard model

Compatible with more than 100 models
A line-up that can contribute to the evolving rechargeable battery manufacturing processes

Pneumatic actuator

Notes: Metal wear powder (copper-based metal is not included) from the mounting part will occur in oscillation mounting formats such as clevis mounting. To order a switch, refer to the switch compatibility table on pages 11 to 14 and order using the listed order model No.

Standard

*1: Zinc plating is used for the sealing washer.
*2: Zinc plating is used for the cushion packing.

Cylinder switch

[How to order switch]

If you order switches for the P4 Series separately, do as follows.

SW-□□□-P4 example SW-T2H-P4

(*1) When ordering Low-Voltage Directive compliant products separately, do as follows.

SW-□□□-ST-P4 example SW-T5H-ST-P4

(*2) If you order products with resin connector Discrete, do as follows. Applies to the above T2H, T2YH, T2WH, K2YH, M2WV, F2H only.

SW-□□□-P4J example SW-T2H-P4J

[Incorporated switch]

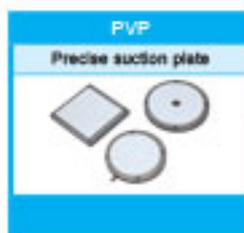

For cylinder specification P4 and P40, switch indicating "P4" is supplied. Cylinder mountable switch differs according to each cylinder.

Refer to the switch compatibility table on pages 23 to 26.

Example) GRC: Reed switch T0* and T3* cannot be mounted.

SRM0: Proximity 1-color display T2*, T3* cannot be installed.

Pneumatic valves

How to order P4 Series

-P4 : Indicates the product that requires modification to SUS fitting with P4 specification against standard products.

P4 compliant as standard: Indicates products that comply with P4 specifications as standard products and do not require *-P4* at the end of the model number.

P4 Series (flow path, sliding part material restrictions)

HP Series

Optimized sliding parts. Does not break even with high frequency usage

Long service life cylinder

HP1 Series **P4**

Unexplained stops
Significantly reduced

Number of replacements
Significantly reduced

Durability count
33 million cycles or more

Subject to CKD prescribed conditions

Improved environmental resistance. Does not break even in dusty environments

Environment-resistant cylinder

G-HP1 Series

Unexplained stops
Significantly reduced

Number of replacements
Significantly reduced

Environmentally-resistant
improvement

Durability count
5 million cycles and over

Subject to CKD prescribed conditions

Increased linear guide rigidity. Achieves high rigidity, high precision, and high durability

Linear Slide Hand

LSH-HP1 Series **P4** LST-HP1 Series

Unexplained stops
Significantly reduced

Number of replacements
Significantly reduced

Exchangeable
Significantly reduced

Durability count
33 million cycles or more

Subject to CKD prescribed conditions

Grips and measures simultaneously. Can be replaced before breakdowns

Measuring hand

LSHM-HP2 Series LSTM-HP2 Series

Unexplained stops
Significantly reduced

Number of replacements
Significantly reduced

Predictive maintenance
Available

Durability count
23 million cycles or more

Subject to CKD prescribed conditions

Increased Component service life and productivity from compressed air

Air booster

ABP2-HP1 Series

Unexplained stops
Significantly reduced

Number of replacements
Significantly reduced

Durability count
13 million cycles or more

Subject to CKD prescribed conditions

Models compatible with the P4* Series are also available. Refer to HP Series General Catalog (Catalog No.CC-1421A) for details.

These are not compatible with P4 Series Rechargeable Battery Components.

Electric motion components

ABSODEX

Direct drive motor

AX Series

Direct drive motor ideal for indexing table drive

Maximum torque: 1.2Nm to 1000Nm

TDISC[®] Servo Motor

Direct drive motor

TDISC Series

Direct drive motor compatible with various high-end processing stages

Maximum torque: 6.5Nm to 3700Nm

ROBODEX^{Std.}

Slider

ETV/ECV Series

- Motorless specifications
- Low dust specification (ECV)
- 6 sizes
- Servo motor 100 to 750W compatible
- Max. load capacity: 85kg (horizontal)
- Max. Stroke: 3500mm

ROBODEX^{Pulse}

Table

FLCR Series

- Ball screw + belt drive
- 3 sizes
- Built-in motor saves space
- G Option connected to controller ECG
- Brake options available

ROBODEX^{Pulse}

2-Finger Gripper

FLSH Series

- Sliding screw drive
- 3 sizes
- Manual finger position adjustment
- Self-lock mechanism
- G Option connects to controller ECG

Electric shuttle mover

ESM Series

- Motorless specifications
- Three-dimensional transport P&P system
- Belt drive
- Various motors can be mounted (motorless type)
- Long stroke with a max. length of 20 m

ROBODEX^{Pulse}

Rotary

FGRC Series

- Worm gear + belt drive
- 3 sizes
- Manual table position adjustment
- Self-lock mechanism
- G Option connected to controller ECG

ROBODEX^{Pulse}

Thin 2-Finger Gripper

FFLD Series

- 3 sizes
- Built-in controller
- 1 cable
- Max. Stroke 80mm (one side)
- Max. gripping power 500N (one side)
- Interface IO-Link

Image processing program

Facilea

Visual programming tool for image processing

Facilea

20-minute easy image processing even for beginners

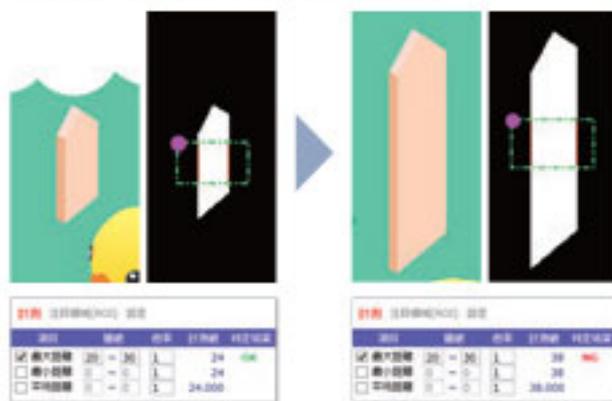

Simple 3-step

Anyone can easily build an image processing system by dragging and dropping and entering simple settings.

[Distance measurement]

Converts a color image to a gray image and binarisation*. Measure the distance, and make a judgment.

* binarisation: Processing that converts an image to black and white

Assistive device

Transform workstyles with assistive devices

PowerArm

PAW Series

Improves work environment by assisting in heavy duty work

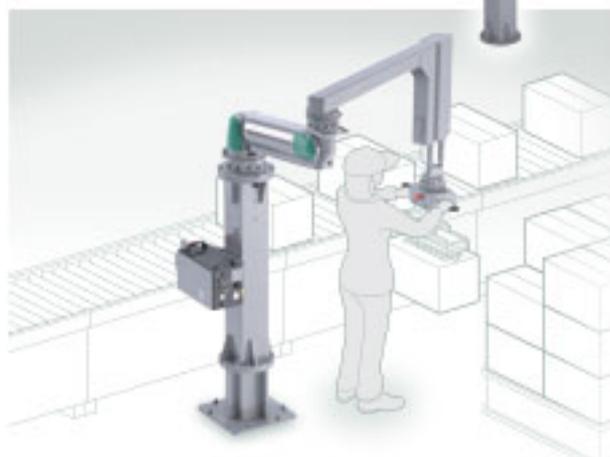

PAW Series

PowerArm (palletizing specifications)

PAW-A* Series

Space-saving and easy stacking and unloading of work

Catalogs

Eight different catalogs are available.

- Pneumatic Valves (Catalog No. CB-023SA)
- Pneumatic Cylinders I and II (Catalogs No. CB-029SA, CB-030SA)
- General Purpose Valves (Catalog No. CB-03-1SA)
- Pneumatic, Vacuum and Auxiliary Components (Catalog No. CB-024SA)
- Vacuum System Components SELVACS (Catalog No. CC-798A)
- ABSODEX General (Catalog No. CB-054A)
- Electric actuator Motorless General (Catalog No. CB-055A)
