

PAW Power Arm

The PAW is CKD's second generation PowerArm. It is a simple, clever, and mobile assistive device that uses pneumatic power to create a safer workplace. A combination of multiple arms allows for flexible transfer of workpieces in tight spaces without worrying about interference from ceilings or walls. Automatic weight detection and pressure regulation provide constant balance and smooth performance that will save workers' backs and increase productivity.

The most versatile pneumatic assistive device in the industry

- Combine up to 3 axes for 2.6 meters of reach to suit any application
- Transport the PowerArm easily with the movable base
- Work on various payloads through the automatic weight detection control system
- Fold for compact storage (650mm tall) when not in use
- Select vacuum, hook, fork, internal and external clamp end effectors

Innovative technology to provide a safer workplace

- Eliminate back pain that accounts for more than half of work-related injuries
- Overhead hoists and arm balancers still put strain on worker's back
- Ideal air circuits maintain balance with no effort from operator
- Unlike traditional assistive devices, PAW is not limited by overhead obstruction
- Block valve, rotation lock, and snag prevention joints help increase overall safety

RAM

SOLUTIONS, INC.

YOUR LEADING AUTOMATION PARTNER

RAM Solutions, established in Michigan in 1999, is an authorized Partner for Automation. We offer our customers the best-engineered solutions available today and value-added quality products used in automated industrial applications and robotics. RAM Solutions serves customers in the United States, Canada, and Mexico. We are also a certified veteran-owned business.
